Accessibility Statement

How usable the EasySeer website and desktop tool are for everyone.

Our aim

We aim for WCAG 2.2 level AA on the EasySeer website and on the EasySeer desktop tool. We checked both with an AI automation tool, and both passed. Automated checks do not find every problem, and neither has had an independent audit.

What we do

- Every page can be used with a keyboard, with a visible focus outline and a skip link.
- Form fields have labels, and errors and progress are announced to screen readers.
- Buttons show visible progress while they work.
- Text and colours are checked for contrast in light and dark themes.
- Pages work on phones, tablets and desktops.

Known gaps

- Automated checks cannot test everything. Testing by people with a screen reader and a keyboard has not yet been done for the website or the Windows desktop tool.
- PDF documents, including this one, have not yet been checked with screen readers.

Ask for help

If something is hard to use, write to courses@skilldux.com. We reply within 24 hours and will give you the content in another form where we can. We have not yet set a date for full WCAG 2.2 AA.

EasySeer is an AI tool. Built to follow academic ethics. No promise of better results, acceptance or publication.
